

Request for survey to collect data for Mobile Application

Dear Sir,

I am Viraj Uday Singh, a student of class X at DPS, Vasant Kunj, New Delhi. I feel that close interaction between my parents and teachers has helped me immensely in my academic performance and over all discipline. This interaction has been facilitated by technology where my parents and teachers have been actively interacting through WhatsApp groups and other servers.

I am in the process of developing a Mobile Application namely "**Hamsaath**" (We together) for simple and smooth interaction between the parents and the teachers. This will be a tool for teachers to report on student participation, performance and upcoming assignments and provide parents with simple report and analytics to see their child's performance on time. There are mobile applications already available for such interactions but I want to make a simpler and cost effective application.

For this project, I seek your help in collecting data from parents and teachers regarding their expected outcomes from this Mobile Application.

Going forward, once the Application is developed, I will endeavor to provide this application free of cost to your school through sponsorship.

I am enclosing one page survey forms separately for parents and teachers in Hindi and English. I will be grateful if you could provide me at least 200 responses from parents and 30 teachers.

Thanking you,

Yours faithfully,

Sd/-

Viraj Uday Singh
